

COMPUTACENTER CONSOLIDATES AND RELOCATES GLOBAL DATA CENTERS

OBJECTIVE:

Computacenter was brought in to help complete an initiative to consolidate four entities into one single entity for a global financial services institute.

SOLUTION:

Customer Initial Requirements:

- Data Center Consolidation & Relocation
- Workload Migration

The customer insisted they had everything else covered but as we started going through the project with them, we uncovered a number of gaps that we needed to manage for them.

Our Solution:

- Business Technical Assessment and Solution Assessment - current and future state, executive summary, roadmap, solution overview, budgetary BOM and services pricing.
- Proof of Concept - KPIs, testing, vendor support management.
- Solution Design & Implementation - configuration, system routing, applications, physical and environmental diagrams.
- Production - monitoring, availability, performance
- Operations Control - applications, technical and end user experience management.
- Continuous Improvement - continual service improvement, strategy improvement and metrics
- Decommission - requirements gathering, worksite preparation and deviation communication.

OUTCOME:

To date, we have successfully completed 15+ logical migrations and one physical relocation of equipment to consolidate their data centers.
